

Le Thanh Hieu - Waldy

Viet Nam

Software Engineer

Summary

Backend engineer owning the core production system of FitSo, a wellness/social startup — a 68K-LOC NestJS monorepo (33 modules) split into microservices, running on MongoDB + Redis behind Traefik. Also operates the production Linux/Docker infrastructure and ships admin tooling. Not a generic stack list — one system, owned end to end.

Work Experience

Full-Stack Engineer

Mar 2025 – Present

FitSo Hub Innovation • HCMC

- Own the core backend (NestJS + TypeScript, MongoDB, Redis): 33 modules, ~68K LOC; led the monorepo → microservices split (fitso-service ↔ fitso-store-service over NestJS TCP)
- Run production infrastructure: Docker Compose (8 services), Traefik reverse proxy, Ubuntu LTS servers — tuned to run lean on startup resources
- Built responsive admin dashboards and websites for company operations
- Covered iOS (SwiftUI) for ~2 months during a staffing gap: shipped screen updates and logic fixes by extending existing components
- System R&D: evaluated cost-optimal infra options under a tight startup budget

Backend Developer Intern

May 2024 – Dec 2024

An Phu Viet • HCMC

- Coordinated a 4-person intern team delivering the "JectHub" project
- Integrated third-party camera SDKs into a WinForms application for real-time monitoring
- Researched and prototyped backend architecture for a high-volume data processing pipeline

Skills

NestJS, Git, Linux, API Design, Database management, Problem Solving, TypeScript, NodeJS, MongoDB, Redis, Docker, Traefik

Certificates
